## Material Safety Data Sheet

### S15

#### Identification

**Product Name:** S15  
**Trade Name:** S15  
**Use:** Homeopathic Biodynamic Fertiliser  
UN Number: None Allocated  
Dangerous Goods Class: None Allocated  
Hazchem Code: None Allocated  
Poisons Schedule: None Allocated  
With Holding Period: Nil

#### Physical Description/Properties

**Appearance & Odour:** Clear liquid with faint herb odour

Boiling Point (C) :	No Data	Specific Gravity:	1.06
Vapour pressure mm/Hg:	No Data	Melting Point:	Liquid
Vapour Density:	No Data	Evaporation Rate:	Low
Solubility in water:	completely soluble	Percent Volatile:	Nil

**Flammability Limits** Non-Flammable

#### Ingredients

Homeopathic dilutions of Dandelion, Oak Bark mixed using a 12% alcohol base

#### Health Hazards

This is a relatively new product on the market. Short-term exposure by all routes is considered to be non-harmful. S15 is exempt from APVMA registration in Australia as it is a biodynamic fertiliser.

**Swallowed:** up to 250mls has no effect when swallowed by men.

**Skin:** Contact with the skin gives rise to no irritation.

**Eyes:** Unlikely to cause irritation. However there is no data available.  
If irritation is caused flush the eyes with running water

**Inhalation:** Once again there is a shortage of data on this subject. There have been no reports of breathing difficulties from operators in the field even in windy conditions.

As with any product, ingestion, inhalation and prolonged or repeated skin contact should be avoided by good occupational work practices.

#### Storage &

**Transport:** Not defined as a Dangerous Good by the Australian Code for the transport of Dangerous Goods by Road and Rail.

**Spills:** The product is not flammable.  
The product is quite soluble in water and can be flushed away with quantities of water.  
The material is neither slippery nor corrosive and can be simply washed into the soil.

**Disposal:** Should not be disposed of directly into water courses.

#### Fire/Explosion

**Hazards:** This material will not burn even if surrounded by fire due to the high concentration of water in the formulation. It is more likely to dampen a fire or present a barrier depending on how it is stacked.
