March	x 2	RipeMax	Increase Ripening Reduce Splitting
	x 1	FG4	
	x 2	Zeroln	
April	x 1	Etherics 1000	

This spray program is a guide to what to spray and how many times per month to spray.

The season will ultimately determine what to do, so you will need to fit it to your situation.

These spray applications can be applied with any other spray application you are doing. To date no incompatibility issues have arisen.

DO NOT apply Etherics 1000 with any of the BdMax specialty sprays.

It can be applied with any other product or fertiliser round though.

FG4 should not be considered as your sole fungal influence, as yet. It works to alleviate the situation that leads to fungal attack rather than 'killing the fungus'. This should show as a reduction in the instance of fungus initially. So continue with Copper or Sulphur etc as you see fit
